laser additive manufacturing of metallic materials and components discusses the current state and future development of laser additive manufacturing technologies detailing material structure process and performance the book explores the fundamental scientific theories and technical principles behind the elements of laser additive manufacturing touching upon scientific and technological challenges faced by laser additive manufacturing technology this book is suitable for those who want to further understand and master laser additive manufacturing technology and will expose readers to innovative industrial applications that meet significant demand from aeronautical and astronautical high end modern industries for low cost short cycle and net shape

manufacturing of structure function integrated metallic components with the increasing use of industrial applications additive manufacturing processes are deepening with technology continuing to evolve as new scientific and technological challenges emerge there is a need for an interdisciplinary and comprehensive discussion of material preparation and forming structure design and optimization laser process and its control microstructure and performance characterization and innovative industrial applications hence this book covers these important aspects highlights an integration of material structure process and performance for laser additive manufacturing of metallic components to reflect the interdisciplinary nature of this technology covers cross scale structure and performance coordination mechanisms including micro scale material microstructure control meso scale interaction between laser beam and particle matter and macro scale precise forming of components and performance control explores fundamental scientific theories and technical principles behind laser additive manufacturing processes provides innovation elements and strategies for the future sustainable development of additive manufacturing technologies in terms of multi materials design novel bio inspired structure design tailored printing process with meso scale monitoring and high performance and functionality of printed components

laser welding is a rapidly developing and versatile technology which has found increasing applications in industry and manufacturing it allows the precision welding of small and hard to reach areas and is particularly suitable for operation under computer or robotic control the handbook of laser welding technologies reviews the latest developments in the field and how they can be used across a variety of applications part one provides an introduction to the fundamentals of laser welding before moving on to explore developments in established technologies including co2 laser welding disk laser welding and laser micro welding technology part two highlights laser welding technologies for various materials including aluminium and titanium alloys plastics and glass part three focuses on developments in emerging laser welding technologies with chapters on the applications of robotics in laser welding and developments in the modelling and simulation of laser and hybrid laser welding finally part four explores the applications of laser welding in the automotive railway and shipbuilding industries the handbook of laser welding technologies is a technical resource for researchers and engineers using laser welding technologies professionals requiring an understanding of laser welding techniques and academics interested in the field provides an introduction to the fundamentals of laser welding including characteristics welding defects and evolution of laser welding discusses developments in a number of techniques including disk conduction and laser micro welding focusses on technologies for particular materials such as light metal alloys plastics and glass
